

# **Modular multi stackers DE5245, RFID card dispenser + global capture mechanism.**

## **Specifications**

**RS232c Protocol, tentative**

04 2014

## **Summary**

1. Overview	page 1
2. General Specifications	page 2
3. Functions	page 2
4. Physical Specifications	page 3
5. Definition of orders in function mode	page 4
6. Status and version firmware	page 4
7. Transmission Protocol	page 5,6

## 1. Overview

The DE5245 is a dispenser of RFID cards of the newest generation, with the RS232c interface.

The DE5245 only operates under PC control

The DE5245 does not contain its own RFID coupler. A polycarbonate support allows the integrator to install his own.

## 2. General specifications

Accepted cards:	Laminated Plastic PVC (non-transparent or translucent) with a Thickness between 1 and 0.6mm
Card Transport:	Motorized at 150 mm/s
Storage Capacity	250 0.76mm cards
Minimum card detection:	approx. 25 cards
Communication:	EIA RS232c 9600 N 8 1
Serial cable max.	15 meters
Power Supply:	24v DC +/- 10%
Consumption:	250mA 1.2A peak
Operating Conditions:	indoor use only Temperature range: 0 – 40°C Humidity range: 30 – 80%

#### 4. Physical specifications of transmission and pin out connectors

**Transmission mode:** asynchronous, EIA RS232c

**Format:** 96,N,8,1

**Characters service:**

Stx: '!' 21hex

Etx: 'cr' 0dhex

**Connection Com.**

DE5245 pins Sub-D fem.

PC pins Sub-D m.

Pin 2: receive data	←	2
Pin 3: transmit data	→	3
Pin 5: Signal Gnd	< ----- >	5
		4---
		6 ---
		7---
		8---

**Power connector** Molex 3069 3 pins

- 3 = + 24v

- 2 = Gnd

## 5. Command definitions and status word

Command	definition
ASCII	hex
! A cr	21h 41h 0Dh
! B cr	“ 42h “
! C cr	“ 43h “
! D cr	“ 44h “
! E cr	“ 45h “
! F cr	“ 46h “
! G cr	“ 47h “
! V cr	“ 56h “

After executing a command, the DE 5245 always sends the status word

## 6. Status and Firmware Version

(s) status word (1 byte)

Bit 0: = , bit 0 and 1 set to 1: dispenser on original position

Bit 1: = , bit 0 reset to 0 and bit 1 set to 1: card under antenna

Other values: error

Bit 2: = 1, indicates that there are less than 25 cards left in the hopper

Bit 3: = 1, indicates capture mechanism on present position. (if connected)

Bit 4: = 1, indicates capture mechanism on capture position (if connected)

Bit 5=0 1 indicate wrong command \*

Bit 6=1

Bit 7=0

\* a function error is generated if an command cannot be executed due to the present situation.:

Example: dispensing command if a card is already placed under the antenna.

The bit error is automatically erased after being transmitted.

The firmware version allows the software application to know the n°. of the firmware version of the dispenser.

## 7. Transmission protocol

Principle.

The Host sends commands, then the DE5245 (executes and automatically sends the status word.

The Host cannot send a new command before receiving the status word, which is the acknowledgment of the previous command.

If the next command is sent before, it's lost.

### Dispense a card

**DE5245 dispenses a card and places it under the antenna.**

Host		DE5240
! B cr	→	
	←	ack cr
Dispenses a card from the stack and places it under the antenna RFID		
	←	! [s] cr

### Present a card

**DE 5245 presents card**

Host		DE5245
! C cr	→	
	←	ack cr
Moves the card from the antenna to the exit		
	←	! [s] cr

### Capture a card

**Internal card capture**

**Before sending this command, it's necessary to send the command capture position to the DE5245 N°1, which is connected to the capture mechanism.**

Host		DE5245
! D cr	→	
	←	ack cr
DE 5245 captures ejected card underneath.		
	←	! [s] cr

### Capture position

**Positioning the capture mechanism on capture position.**

The trap stay in position during 10 s

Host		DE525
! F cr	→	ack cr
	←	! [s] cr

### Status word

#### Ask for status word

Host DE5240

**! A cr** →

DE5240 return ← **! [s] cr**

This command can be send at any time, except when DE5240 process an opération.  
Then, the command is lost.

### Firmware version

DE5240 can send his firmware version

Host DE5240

**! V cr** →

DE5240 return ← **! text ASCII cr**
